SUMMARY

Computer Science student with strong backend development skills in Python, PHP, and C++. Experienced in building full-stack e-commerce platforms, secure authentication systems, LMS platforms, database management, and AI model integration. Passionate about scalable backend architectures and data-driven solutions with a quick learning mindset.

EDUCATION

Institute of Southern Punjab

Bachelor of Science in Computer Science

Multan, Punjab, Pakistan

July 2022 – July 2027

- Expected Graduation: July 2027
- Relevant Coursework: Data Structures, Algorithms, Database Systems, Object-Oriented Programming, Web Development, Parallel & Distributed Computing

TECHNICAL SKILLS

Languages:	Python, PHP, C++ (OOP), SQL, JavaScript
Frameworks:	Flask, Django (Basic)
Databases:	MySQL, JSON File Storage, SQLite
AI/ML:	Python APIs for AI Models, Machine Learning Libraries (Exploring)
Web Tech:	HTML, CSS, REST APIs, Authentication Systems, LMS & E-commerce Development
Tools:	Git, Linux, Docker (Basic), JSON, Security Best Practices
Core:	Backend Dev, Data Structures & Algorithms, System Design, Secure Auth, DB Optimization, Blueprint Architecture

PROFESSIONAL EXPERIENCE

Self-Employed Developer | Robusto Solutions Pakistan

September 2024 – Present

- Architected and implemented a secure PHP-based authentication system with JSON file storage, featuring bcrypt password hashing and brute-force protection through login attempt tracking
- Reduced potential security vulnerabilities by 95% through implementation of industry-standard password hashing algorithms and secure session management
- Integrated multiple AI models via Python APIs, developing custom scripts for natural language processing and data analysis tasks
- Designed and optimized database schemas for efficient data retrieval, improving query performance by implementing proper indexing strategies
- Developed RESTful API endpoints for seamless frontend-backend communication with proper error handling and validation

PROJECTS

Hero Style — Full-Stack E-Commerce Platform

2025 – Present

Python, Flask, MySQL, Blueprint Architecture, REST APIs, Jinja2, Vanilla JS

- Built a complete full-stack e-commerce web application for a watch and earbuds store using Flask's Blueprint architecture with modular separation of admin, products, orders, users, and categories modules
- Developed a full Admin Dashboard with role-based access control including product CRUD with image upload, category management with bulk activate/deactivate, order tracking, revenue analytics, and support form management
- Built a public-facing user website with hero sections, product pages, category filters, cart system, promo code checkout, order placement, and order confirmation flow
- Implemented a complete order lifecycle: cart management, checkout with promo codes, order tracking with status progression, item-level returns, full-order returns, and cancellations — all with real-time DB updates
- Created a user portal with authentication, profile management, wishlist, order history, product reviews with star ratings, my returns, and my cancellations — modal-based UI with zero page reloads
- Designed a normalized MySQL schema across 14 tables with foreign key constraints, JOIN-heavy analytics queries, and soft-delete patterns to preserve data integrity

Learning Management System (LMS)

2025 – Present

Python, Flask, MySQL, REST APIs

- Developing a full-featured LMS platform with student enrollment, course management, and assignment submission modules
- Designed normalized relational database schema in MySQL to handle users, courses, modules, and progress tracking
- Built RESTful APIs in Flask for student and instructor dashboards with role-based access control (RBAC)
- Implemented secure session management and authentication middleware to protect student and instructor data

Secure Authentication System

2024

PHP, JSON, Bcrypt, Security

- Built production-ready login system with encrypted password storage and session management
- Implemented rate limiting and account lockout mechanisms to prevent brute-force attacks
- Designed user-friendly error handling with detailed logging for security audit trails

AI Model Integration Platform

2024

Python, Flask, REST APIs, Machine Learning

- Created Python-based platform for integrating and testing various AI models through unified API interface
- Developed data preprocessing pipelines for improved model accuracy and performance
- Built interactive dashboard for model performance monitoring and result visualization

Database Management System

2023 – 2024

MySQL, Python, C++, Data Optimization

- Designed normalized database schemas for academic projects with focus on data integrity and scalability
- Implemented CRUD operations with prepared statements to prevent SQL injection attacks
- Optimized complex queries resulting in 40% faster data retrieval times

ACHIEVEMENTS & LEADERSHIP

- Built and deployed a production-grade multi-module e-commerce platform (Hero Style) with both a user-facing website and a full admin control panel — demonstrating end-to-end full-stack development capability
- Completed multiple self-directed projects demonstrating strong problem-solving and independent learning abilities
- Actively exploring cutting-edge AI technologies and implementing practical applications

- Strong foundation in algorithms and data structures with consistent practice on competitive programming platforms

ADDITIONAL INFORMATION

Languages: English (Fluent), Urdu (Native)

Interests: Backend Systems Architecture, Distributed Systems, Cloud Computing, AI/ML Applications, LMS & EdTech Platforms, E-commerce Development
